

Oumkaltoum EL-YAQOUBI

Madam, Sir.

I hope that you are well and that this internship application finds a favorable echo with you and your team. Currently in the second year of the cycle of Engineer in Software Engineering and Integration of Computer Systems (ILISI) at the University of Science and Technology of Mohammedia, I am looking for a challenging end-of-year internship opportunity where I can build on the experience gained through significant academic and professional projects. During my last internship, I had the opportunity to design a web application for inventory management and billing, which allowed me to develop my practical skills. Thus, my previous professional and academic experiences in the field of web and data management attest to my ability to meet complex challenges and offer effective solutions. In particular, I have recently contributed to projects to model hepatitis C progression and track card payments. These experiences allowed me to strengthen my skills in data analysis, modeling and the use of advanced technological tools such as Python, SQL Server, ETL, OLAP and Power BI. In addition, my participation in various projects such as traffic management in Casablanca, the development of an application for Busway, and the creation of an e-platform business, have strengthened my technical skills and demonstrated my commitment to quality work and expected results.

I am particularly attracted to your company because of its remarkable positioning, innovation culture and commitment to excellence. I am confident that my skills and desire to learn will be an asset to your team.

I attach my RESUME to give you a more detailed overview of my career

I thank you for your attention to my application and remain at your disposal for any further information.

Sincerely,

Oumkaltoum EL-YAQOUBI
